

Donation Tracker Multiple Database Options

If your office is currently, or thinking about, acting as a back office for pledge processing for more than one United Way office, then we have the ideal solution for you.

Donation Tracker now offers you the ability to record and maintain pledges and payments for multiple United Way locations. Each location operates autonomously from the other, which gives you total control over how each location's campaign is configured and recorded. Switching between locations is as easy as selecting a menu option and picking the desired location from a pre-defined list. Because you are actually working out of multiple Donation Tracker databases, you can configure each location's specific settings without impacting any of the other locations. These settings include Security, Campaign Map, Designated Agencies, and the Accounts themselves. It's just like having two or more copies of Donation Tracker on your desktop, one for each location.

The cost per extra location is \$1,300 for the installation, setup, training, and annual support & maintenance. The yearly support & maintenance (after first year) for each extra location is \$650 per year.

Please call us for a more in-depth discussion of how the multiple database version of Donation Tracker could be used in your office.
